

RECOGNIZE ACCURATELY

Close the Books. Defend Every Number.

Revenue recognition shouldn't depend on a tribe of spreadsheet keepers. Automate ASC 606 and IFRS 15 against every selling motion you ship — subscriptions, usage, milestones, hybrid — with deterministic accounting and AI that shows its work.

ENHANCE REVENUE ACCURACY AND EFFICIENCY WITH AUTOMATED RECOGNITION

Revenue Recognition

Automate complex revenue recognition with configurable rules, built-in compliance, and complete audit-trail visibility.

Financial Management

Automate financial operations from transaction mapping through period close, with accurate journals and consolidated reporting.

Contract & Deferred Revenue

Manage revenue contracts and automate modifications, including performance obligations and re-allocation of revenue.

Audit Readiness & Disclosure

Stay audit-ready with complete data lineage, built-in controls, and automated disclosure and period-end reporting.

PROVEN RESULTS

40%

Reduction in average time to close

20–50%

Recovery of revenue leakage through automation

30%

Reduction in billing complexity through platform consolidation

20–30%

Reduction in billing, AR, and revenue-recognition overhead

ANATOMY OF THE CLOSE

Ingest

Contracts, orders and billing events stream in from any upstream source.

Identify

Performance obligations identified; SSP allocated and explained.

Recognize

Ratable, point-in-time, usage or milestone — per obligation, per policy.

Reconcile

Modifications detected; waterfalls reallocated with full audit trail.

Report

Journal entries posted to the GL. Disclosures and drill-downs ready.

BUILT FOR THE NEXT TEN PRICING MODELS, NOT THE LAST ONE

Efficiency Gains

faster closes, fewer manual entries, and finance teams freed for higher-value analysis.

Compliance Made Easy

ASC 606 and IFRS 15 baked in; audits become a query, not a quarter.

Defensible by Design

encode each recognition policy once, and every posted entry carries the rule, version and inputs that produced it.

Faster Judgment, Full Transparency

AI flags recognition inconsistencies during the period, not at close, and drafts SSP estimates for a controller to approve.

You Don't Have a Revenue Problem. You Have a Proof Problem.

When contracts, billing events, allocations, and journal entries live in separate systems, finance spends the close tracing data, rebuilding schedules, and explaining discrepancies. The revenue may be correct, but proving it becomes the work.
