

BillingPlatform AI

Monetization at conversation speed.

BillingPlatform AI is native to the revenue lifecycle, not bolted on. It's built on a living model of how your business runs. From first deployment to every business iteration, BillingPlatform AI turns your billing, revenue, and finance operation into a conversational enterprise: faster to stand up, easier to operate, deeper to interrogate, and quicker to evolve.

The foundation: a living, metadata-driven model

BillingPlatform AI is powered by one living, metadata-driven model that spans your billing, payments, collections, revenue recognition—holding every product, rate, workflow, and rule in a single structure. The differentiator is architectural: the AI understands your whole platform through one data model, not a patchwork of per-function connections that break when something changes. With BillingPlatform AI, when you make a change, the AI understands it day one, with no integrations to reconfigure.

Accelerate Implementation

Describe your requirements; the AI configures the system. Faster time to value.

Launch New Pricing Models

New products and pricing live in a conversation. No tech resources required.

Analyze & Forecast Performance

Ask in plain language. Get real-time answers on performance and forecasts.

Govern & Control Every Change

Surface anomalies before they post; everything bound by your rules and auditable.

Accelerate Implementation

Traditional billing implementations run for quarters because every requirement is translated, configured, documented, and tested by hand. BillingPlatform AI collapses that into weeks. Plain-language requirements become working configuration completed by AI, with the runbooks, ERDs, and validation produced alongside. Your team watches the platform take shape and understands it before it goes live, with no spec-and-build handoff and no long ramp.

Launch New Pricing Models

Competitors move, customer behavior shifts, and revenue strategies evolve faster than billing systems traditionally allow. BillingPlatform AI closes that gap. New products, pricing models, bundles, promotions, and GTM motions get described in conversation, configured against the metadata model, validated, and documented in minutes and hours. Reconfigure an existing model when the market moves, with the impact modeled before any change reaches a live account.

Analyze & Forecast Performance

Most finance and revenue insight is gated behind reports, BI queues, and tribal knowledge, slow, fragmented, and often out of date. BillingPlatform AI opens permission-appropriate, real-time access to every dimension of your billing, revenue, and finance data, in the context of the underlying business process. Ask what happened and what is coming, in plain language: performance today, and where churn, cash flow, margin, and revenue are headed, answered from live data, not a stale export.

Govern Every Change

Giving AI authority over billing should make a finance leader cautious, unless every action is governed. BillingPlatform AI operates inside your existing role-based permissions, runs every action as a real user with no elevated AI account to manage, and captures every change in the native audit trail, attributable and reversible. Generated workflows pass the same validation as hand-built ones, so what will not run cannot be saved, and one data model means one audit trail across quote-to-cash, not four systems with seams where trust breaks. Layer your own validations and approval workflows on top wherever your process requires sign-off. The AI acts; finance stays in control.

Why it compounds

BillingPlatform AI is not a chatbot and not a bolted-on feature. It is a foundational shift in how customers operate the platform—describing outcomes, delegating execution, and trusting it with the controls they already rely on. As the broader AI ecosystem advances, that investment compounds without a re-platforming project. Customers on legacy or rigid billing systems will need multi-year programs to reach where BillingPlatform customers already are.

See it on your own workflows. Talk to your BillingPlatform account team to request a demo — or point your AI assistant at your sandbox tenant and try it yourself.
